## RProtoBuf 0.4.4: Quick Reference Guide

Romain François

Dirk Eddelbuettel

Murray Stokely

July 10, 2016

```
example proto file package tutorial;
option java_package = "com.example.tutorial";
option java_outer_classname = "AddressBookProtos";
message Person {
  required string name = 1;
  required int32 id = 2;
  optional string email = 3;
  enum PhoneType {
   MOBILE = 0;
   HOME = 1;
    WORK = 2;
  }
  message PhoneNumber {
    required string number = 1;
    optional PhoneType type = 2 [default = HOME];
 repeated PhoneNumber phone = 4;
  extensions 100 to 199;
message AddressBook {
  repeated Person person = 1;
service EchoService {
 rpc Echo (Person) returns (Person);
read proto description files
> readProtoFiles( "somefile.proto" )
> readProtoFiles( dir = somedir )
> readProtoFiles( package = AnRPackage )
create a message
> message <- new( tutorial.Person, id = 0,
        name = "Romain Francois",
          email = "francoisromain@free.fr" )
serialize a message to a file or binary connection
> tf1 <- tempfile()</pre>
> message$serialize( tf1 )
> tf2 <- tempfile()</pre>
> con <- file( tf2, open = "wb" )</pre>
> message$serialize( con )
> close(con)
```

> message\$serialize( NULL )

[1] Oa Of 52 6f 6d 61 69 6e 20 46 72 61 6e 63 6f [16] 69 73 10 00 1a 16 66 72 61 6e 63 6f 69 73 72

[31] 6f 6d 61 69 6e 40 66 72 65 65 2e 66 72

```
read a message from a file or binary connection
```

```
> tutorial.Person$read( tf1 )
message of type 'tutorial.Person' with 3 fields set
> con <- file( tf2, open = "rb" )
> tutorial.Person$read( con )
message of type 'tutorial.Person' with 3 fields set
```

## Get/Set fields

```
> email <- message$email
> message$id <- 2
> message[[ "name" ]] <- "Romain"
> id <- message[[ 2 ]]</pre>
```

## Message methods

has	Indicates if a message has a given field.
clone	Creates a clone of the message
isInitialized	Indicates if a message has all its required fields set
serialize	serialize a message to a file or a binary connection or
	retrieve the message payload as a raw vector
clear	Clear one or several fields of a message, or the entire
	message
size	The number of elements in a message field
bytesize	The number of bytes the message would take once
	serialized
swap	swap elements of a repeated field of a message
set	set elements of a repeated field
fetch	fetch elements of a repeated field
add	add elements to a repeated field
str	the R structure of the message
as.character	character representation of a message
toString	character representation of a message (same as
	as.character)
update	updates several fields of a message at once
descriptor	get the descriptor of the message type of this message

```
> writeLines( message$toString() )
name: "Romain"
id: 2
email: "francoisromain@free.fr"
```
